

ADDIS ABABA, ETHIOPIA / PRE-SEED

Same direction. Shared ride.

Dynamic en-route pooling
for the daily commute.

80–120

ETB TARGET RIDER FARE

3–4

PAYING RIDERS / CAR

WORKING MVP • DEMO AVAILABLE

Yonas Ayele ~ yonasayeletola62@gmail.com

PRE-SEED / WORKING MVP / PILOT IN PREPARATION

Software-led. Driver-owned vehicles.

Pay with your time. Or your budget.

Our target commuter has no dependable middle ground.

40 solo journeys per month

16,000+ ETB

at the 400 ETB reference fare

Founder-supplied queue and fare benchmarks, not citywide averages. Validate with dated, route-matched observations.

Match the journey. Not the nearest car.

Passengers join drivers who are already travelling their way.

- 01 80–120 ETB target fare**
70–80% below the 400 ETB reference journey.
- 02 3–4 paying passengers**
Compatible pickups and drop-offs; legal seating capacity.
- 03 No off-route routing**
Safe curbside boarding.
No waiting to fill the car.

Zero detour does not mean zero traffic, boarding time, or passenger wait. Diagram is schematic; safe, permitted pickup points only.

The MVP is built. The pilot is next.

Product progress — not commercial traction.

- ✓ **Geospatial engine**
Functional matching MVP.
- ✓ **Rider + driver interfaces**
End-to-end trip coordination.
- ✓ **Local payment flow**
Implemented; show current scope.
- ✓ **90-second live walkthrough**
Request → match → board → pay.

WORKING DEMO AVAILABLE

ILLUSTRATIVE UI — NOT MVP SCREENSHOTS

Mockups illustrate the product flow only. Replace with actual MVP screenshots or demo footage before an external presentation.

Occupancy is the economic engine.

Lower rider fares can support stronger driver payouts — at sufficient load.

ILLUSTRATIVE • PROPOSED 10% FEE

PILOT TEST Driver net earnings per online hour ≥ comparable solo baseline

ETB; comparable vehicle journeys. Payouts before vehicle costs/taxes. 480 vs 400 = +80 gross, not proven +100 driver uplift.

A repeat-commute market. A corridor entry.

Bottom-up sizing; rider eligibility and adoption still need field validation.

4.114M
Addis Ababa residents
ESS projection / July 2025

Ethio telecom / FY2025–26

ADDIS TAM / ILLUSTRATIVE

25B ETB

annual gross bookings

500k riders × 2 trips/day × 250 days × 100 ETB

CORRIDOR SAM / ILLUSTRATIVE

5B ETB

annual gross bookings

100k riders × same trip frequency, days and fare

At 10%: 500M ETB annual platform revenue potential within SAM.

Rider counts unvalidated; not forecasts. Sources: ESS, July 2025 projection, p.22; Ethio telecom FY2025/26 (national, not Addis-only).

Road-aware by design. Local data over time.

Matching constraints are the differentiation; corridor learning is the moat to build.

NEARBY ≠ REACHABLE

Reject the U-turn. Keep the forward match.

01

FORWARD ROUTE

No off-route pickup or drop-off.

02

HEADING + MEDIANS

Correct, reachable carriageway.

03

CAPACITY + READINESS

Feasible, safe boarding only.

04

LOCAL DATA

Boarding points + repeat activity.

Earn on completed passenger trips.

Asset-light supply. A transparent fee. Contribution-margin discipline.

PROPOSED 10% PLATFORM FEE

ILLUSTRATIVE MONTHLY SCALE

100k trips → **10M ETB** → **1M ETB**

at 100 ETB each gross bookings revenue

REVENUE IS NOT PROFIT

Less payments, maps/comms, support, insurance allocation, refunds and incentives.

8–12 ETB platform revenue per target-fare trip. Driver-owned vehicles; employer accounts after validation.

Illustrative arithmetic, not a forecast. Driver payout is before vehicle costs/taxes. Platform contribution must deduct variable costs.

Fund the proof. Then scale the corridor.

ILLUSTRATIVE FUNDRAISE

US\$10k

12 months / proposed pre-seed round

A working MVP.
Next: repeatable ground economics.

Yonas Ayele
0900011767

PROPOSED USE OF FUNDS

45% Product + engineering

35% Pilot + onboarding

10% Safety + compliance

10% Contingency

MILESTONES THIS ROUND MUST BUY

01 Complete the controlled pilot

02 Prove repeat use + positive contribution

03 3 corridors / 20k monthly paid trips*

*Expansion target, conditional on pilot gates.

Amount, runway, allocation and expansion targets are planning assumptions. Replace with a founder-approved, bottom-up budget.
